alpha-GlcNAcase (N-acetylglucosamine-i-phosphodiester alpha-N-Acetylglucosaminidase) (II). The protein of the invention has protein of the invention has protein of the invention (I). (II) is useful for preparing a phosphorylated lysosomal hydrolase. The phosphorylated hydrolase comprising a terminal mannose-6-phospher, is useful for treating a patient suffering from a lysosomal storage disease. The prospection of the present sequence is used in the exemplification of the invention
                                                                                                                                              9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method of phosphorylating a protein comprising contacting the protein with a soluble GloNAc-phosphotransferase (UDP-N-acety/glucosamine) and producing a phosphorylated protein. The method is useful for treating a patient suffering from a lysosomal storage disease e.g. Fabry's disease. The present sequence represents the amino acid sequence of a GloNAc-phosphotransferase associated protein.
879
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Phosphorylating a protein for treating a patient suffering from a
lysosomal storage disease e.g. Fabry's disease by contacting the protein
with a soluble GlcNAc-phosphotransferase and producing a phosphorylated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

Sequence 1. Application US/09635872A

Sequence 1. Application US/09635872A

Patent No. 6534300

GENERAL INFORMATION:

APPLICANT: CAMPIELD.

TILLE OF INVENTION: METHODS FOR PRODUCING HIGHLY PHOSPHORYLATED LYSOSOMAL HYDROLASE.

FILE REPREMENCE: 1956313US0

CURRENT APPLICATION NUMBER: 00/09/635,872A

CURRENT PELING DATE: 2000-06-10

PRIOR FILING DATE: 1999-09-14

NUMBER OF SEQ ID NOS: 52

SOFTWARE: Patentin version 3.0

Sequence 1, Application US/09986552

Patent No. 6670165

GENERAL INFORMATION:

APPLICANT: CANFIELD, William

TITLE OF INVENTION: METHODS FOR PRODUCING HIGHLY PHOSPHORYLATED LYSOSOMAL HYDROLASE:

FILE REFERENCE: 215089US77DIV

CURRENT APPLICATION NUMBER: 09/635,872

PRIOR FILING DATE: 2001-11-09

PRIOR FILING DATE: 1099-09-14

PRIOR FILING DATE: 1999-09-14

NUMBER OF SEQ ID NOS: 52

SOFTWARE: Patentin version 3.1

Patent No. US20020025550A1

GENERAL INFORMATION:

ACTIVE OF INVENTION: METHODS FOR PRODUCING HIGHLY PHOSPHORYLATED LYSOSOMAL HYDROLASES

TITLE OF INVENTION: METHODS FOR PRODUCING HIGHLY PHOSPHORYLATED LYSOSOMAL HYDROLASES

FILE REPERBENCE: 210119USCONT

CURRENT PELLING DATE: 2001-07-02

PRIOR PELLING DATE: 1999-09-14

PRIOR APPLICATION NUMBER: US 09/635,872

PRIOR APPLICATION NUMBER: US 09/635,872

PRIOR FILING DATE: 2000-08-10

NUMBER OF SEQ ID NOS: 52

SOSUMARE: PATENTING PATE: 2000-08-10

SEQ ID NO. 15

Notch homolog protein - sea squirt (Halocynthia roretzi)
C;Species: Halocynthia roretzi
C;Species: Halocynthia roretzi
C;Species: Halocynthia roretzi
C;Date: 02-8ep-2000 #sequence_revision 02-8ep-2000 #text_change 08-Sep-2002
C;Accession: T30201
R;Hori, S.; Saitoh, T.; Matsumoto, M.; Makabe, K.W.; Nishida, H.
Dev. Genes Evol. 207, 371-380, 1997
A;Title: Notch homologue from Halocynthia roretzi is preferentially expressed in the A;Reference number: Z20775
A;Accession: T30201
A;Accession: T30201
A;Molecule type: mRNA
A;Residues: 1-2352 <HOR>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1467 IISIEEI-----FLESSRRRRALLDPDVEMSKTRHRRATDTSATSEVKVRLDNRNCL 1518
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1519 LNDDSCFWEASAAASYVSASASTGTLQVSFDVSTATSQP-----DETSDPETPLVYIL 1571
